

## Skyview 2 BESS Project: Reminder About Delivery Route and Increased Truck Traffic

June 17, 2026

Potentia would like to remind the community of the approved delivery route for the Skyview 2 Battery Energy Storage System Project, as delivery route information was previously shared in the project newsletter.

In the coming weeks, residents may notice increased truck traffic along the delivery routes. Deliveries will access the project site from **Dobbie Road** and **Shanly Road**, with trucks using the approved route from **Highway 416**, and along **County Road 21** and continuing along **County Road 22**. The BESS units will arrive from the Port of Johnstown starting **Friday, June 26th**. Currently, the plan is to haul 12 BESS units a day from Port to site. See the route below.

Deliveries are expected to take place **Monday to Friday** between **7:00 a.m.** and **3:00 p.m.** Weekend deliveries will only occur if approved in advance by the site team. No deliveries are planned on **July 1** or **September 7**.

All drivers are required to follow the approved route, remain within permitted delivery times, and follow all applicable safety requirements. Drivers are not permitted to stop or wait along municipal roadways, and overnight stays at the job site are not allowed. We appreciate the community's patience and cooperation as this important project moves forward.
